Energy Economics

Index to Volume 17
January, April, July, October 1995

Articles–titles

Electricity supply and demand, pricing

Assessing a disaggregated energy input. Using confidence intervals around translog elasticity estimates, *John J Hisnanick and Ben L Kyer*, 17.2, 125–132

Electricity demand by time and use. An application of the household AIDS model, *Massimo Filippini*, 17.3, 197–204

The capitalist world aggregate supply and demand model for natural uranium, *Voxi Heinrich S Amavilah*, 17.3, 211–220

The impact of electric power on productivity. A study of US manufacturing 1950–84, *Bernard C Beaudreau*, 17.3, 231–236

Socioeconomic development and electricity consumption. A cross- country analysis using therandom coefficient method, *Nadeem A Burney*, 17.3, 185–195

Energy demand and energy efficiency

A capacity growth input–output model with forward recursive solution, *E W Henry*, 17.1, 3–13

Assessing demand when introducing a new fuel. Natural gas on Java, *Willem J H van Groenendaal*, 17.2, 147–161

A total energy demand model of Québec. Forecasting properties, E Arsenault, *J-T Bernard, C W Carr and E Genest–Laplante*, 17.2, 163–171

Economics of scale in energy use in adult-only households, *D S Ironmonger, C K Aitken and B Erbas*, 17.4, 301–310

Energy and CO2 emissions in Spain. Methodology of analysis and some results for 1980–90, *Vicent Alcántara and Jordi Roca*, 17.3, 221–239

Multilevel decomposition of industrial energy consumption, *B W Ang*, 17.1, 39–51

Road transport energy demand in Australia. A cointegration approach, *Rodney Samini*, 17.4, 329–339

The impact of VAT introduction on UK residential energy demand. An investigation using the coinregration approach, *Roger Fouquet*, 17.3, 237–247

Energy–economy interactions

Assessing a disaggregated energy input. Using confidence intervals around translog elasticity, *John J Hisnanick and Ben L Kyer*, 17.2, 125–132

Input-output simulations of energy, environment, economy interactions in the UK, *David Hawdon and Peter Pearson*, 17.1, 73–86

Macroeconomic and sectoral impacts of carbon taxation. A case for the Japanese economy, *Noriyuki Goto*, 17.4, 277–292

Multilevel decomposition of industrial energy consumption, *B W Ang*, 17.1, 39–51

Oil futures prices and stock management. A cointegration analysis, *Stefan Balabanoff*, 17.3, 205–210

Road transport energy demand in Australia. A cointegration approach, *Rodney Samini*, 17.4, 329–339

Socioeconomic development and electricity consumption. A cross-country analysis using the random coefficient method, *Nadeem A Burney*, 17.3, 185–195

The stochastic economics of windpower, *Michael Beenstock*, 17.1, 27–37

The impact of electric power on productivity. A study of US manufacturing 1950–84, *Bernard C Beaudreau*, 17.3, 231–236

Energy and environment

Econometric modelling of international carbon tax regimes, *Clare Smith, Stephen Hall and Nick Mabey*, 17.2, 133–146

Energy and CO2 emissions in Spain. Methodology of analysis ans some results for 1980-90, *Vincent Alcántara and Jordi Roca*, 17.3, 221–230

Global warming and carbon taxation. Optimal policy and the role of administration costs, *Michael Williams*, 17.4, 319–327

Greenhouse gas abatement under ambiguity, *Heinz Welsch*, 17.2, 91–100

Input-output simulations of energy, environment, economy interactions in the UK, *David Hawdon and Peter Pearson*, 17.1, 73–86

Macroenonomic and sectoral impacts of carbon taxation. A case for the Japanese economy, *Noriyuki Goto*, 17.4, 277–292

Optimal acid rain abatement policy for Europe. An analysis for the year 2000, *J P Hutton and G E Halkos*, 17.4, 259–275

The option value of renewable energy. The case of climate change, *David Schimmelpfennig*, 17.4, 311–317

The stochastic economics of windpower, *Michael Beenstock*, 17.1, 27–37

The role of renewable energy in the energy system. An issue in the philosophy of renewal of natural resources, *Sardar M N Islam*, 17.2, 117–124

Energy modelling

A capacity growth input-output model with forward recursive solution, *E W Henry*, 17.1, 3–13

Econometric modelling of international carbon tax regimes, *Clare Smith, Stephen Hall and Nick Mabey*, 17.2, 133–146

Electricity demand by time and use. An application of the household AIDS model, *Massimo Filippini*, 17.3, 197–204

Improved estimators of energy models, *Lee C Adkins and James B Eells*, 17.1, 15–25

Input-output simulations of energy, environment, economy interactions in the UK, *David Hawdon and Peter Pearson*, 17.1, 73–86

The role of renewable energy in the energy system. An issue in the philosophy of renewal of natural resources, *Sardar M N Islam*, 17.2, 117–124

A total energy demand model of Québec. Forecasting properties, *E Arsenault, J-T Benard, C W Carr and E Genest-Laplante*, 17.2, 163–171

Energy pricing

Econmetric modelling of international carbon tax regimes, *Clare Smith, Stephen Hall and Nick Mabey*, 17.2, 133–146

Global warming and carbon taxation. Optimal policy and the role of administration costs, *Michael Williams*, 17.4, 319–327

The impact of VAT introduction on UK residential energy demand. An investigation using the cointegration approach, *Roger Fouquet*, 17.3, 237–247

The imperfect price reversibility of non-transport oil demand in the OECD, *Joyce Dargay and Dermot Gately*, 17.1, 59–71

Macroeconomic and sectoral impacts of carbon taxation. A case for the Japanese economy, *Noriyuki Goto*, 17.4, 277–292

Subsidy free pricing of interruptible service contracts, T *Randolph Beard, George H Sweeney and Daniel M Gropper*, 17.1, 53–58

Taxation of petroleum products. Theory and empirical evidence, *Sanjeev Gupta and Walter Mahler*, 17.2, 101–116

Trading volume, maturity and natural gas futures price volatility, *John H Herbert*, 17.4, 293–299

Oil and gas supply and demand

Assessing demand when introducing a new fuel. Natural gas on Java, *Willem J H van Groenendaal*, 17.2, 147–161

Demand for gasoline in Kuwait. An empirical analysis using cointegration techniques, *M N Eltony and N H Al-Mutairi*, 17.3, 249–253
Energy security. Coping with multiple supply risks, *Peter Zweifel and Susanne Bonomo*, 17.3, 179–183
The imperfect price reversibility of non-transport oil demand in the OECD, *Joyce Dargay and Dermot Gately*, 17.1, 59–71
Oil futures prices and stock management. A cointegration analysis, *Stefan Balabanoff*, 17.3 205–210
Road transport energy demand in Australia. A cointegration approach, *Rodney Samini*, 17.4, 329–339
Taxation of petroleum products. Theory and empirical evidence, *Sanjeev Gupta and Walter Mahler*, 17.2, 101–116
Trading volume, maturity and natural gas futures volatility, *John H Herbert*, 17.4, 293–299

Public utility regulatory economics

Subsidy free pricing of interruptible service contracts, T *Randolph Beard, George H Sweeney and Daniel M Gropper*, 17.1, 53–58
